1 (a) Fig. 6.1 represents the waveform of a sound wave. The wave is travelling at constant speed.

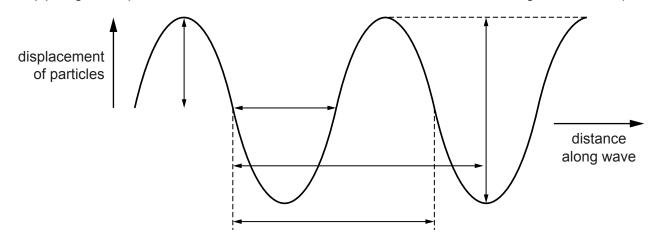

Fig. 6.1

- (i) On Fig. 6.1,
  - label with the letter X the marked distance corresponding to the amplitude of the wave,
  - label with the letter Y the marked distance corresponding to the wavelength of the wave.
- (ii) State what happens to the amplitude and the wavelength of the wave if
  - 1. the loudness of the sound is increased at constant pitch,

| amplitude  |     |
|------------|-----|
| •          |     |
| wavelength |     |
|            | [1] |

**2.** the pitch of the sound is increased at constant loudness.

| amplitude  |     |
|------------|-----|
| wavelength |     |
|            | [1] |

(b) A ship uses pulses of sound to measure the depth of the sea beneath the ship. A sound pulse is transmitted into the sea and the echo from the sea-bed is received after 54 ms. The speed of sound in seawater is 1500 m/s.

Calculate the depth of the sea beneath the ship.

depth = .....[3]

|            |             | Calculate the distance travelled by the pulse of sound during this time.                                                                     |     |

distance = .....[2]

**3** (a) Fig. 6.1 shows an object O placed in front of a plane mirror M. Two rays from the object to 3 mirror are shown.

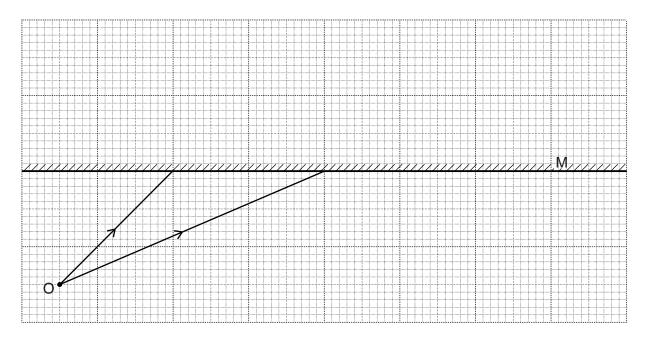

Fig. 6.1

- (i) On Fig. 6.1, for **one** of the rays shown,
  - 1. draw the normal to the mirror,
  - 2. mark the angle of incidence. Label this angle X.

[2]

- (ii) On Fig. 6.1, draw
  - 1. the reflected rays for both incident rays,
  - **2.** construction lines to locate the image of O. Label this image I.

[2]

(b) In Fig. 6.2, circular wavefronts from a point source in a tank of water strike a straight barrier.

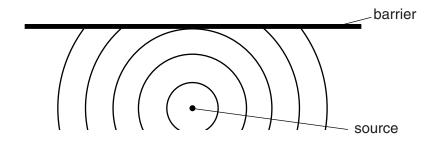

Fig. 6.2

- (i) The reflected wavefronts seem to come from a single point.
  - On Fig. 6.2, mark a dot to show the position of this point. Label this point C.
- (ii) Draw, as accurately as you can, the reflected circular wavefronts. [2]
