MARK SCHEME for the May/June 2010 question paper

for the guidance of teachers

9709 MATHEMATICS

9709/21   Paper 21, maximum raw mark 50

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

Mark Scheme Notes

Marks are of the following three types:

M   Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.

A   Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).

B   Mark for a correct result or statement independent of method marks.

- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.

- The symbol √ implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.

- Note: B2 or A2 means that the candidate can earn 2 or 0.
               B2/1/0 means that the candidate can earn anything from 0 to 2.

  The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.

- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

The following abbreviations may be used in a mark scheme or used on the scripts:

AEF   Any Equivalent Form (of answer is equally acceptable)

AG   Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)

BOD   Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)

CAO   Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)

CWO   Correct Working Only - often written by a 'fortuitous' answer

ISW   Ignore Subsequent Working

MR   Misread

PA   Premature Approximation (resulting in basically correct work that is insufficiently accurate)

SOS   See Other Solution (the candidate makes a better attempt at the same question)

SR   Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

Penalties

MR -1   A penalty of MR -1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through $\sqrt{}$" marks. MR is not applied when the candidate misreads his own figures - this is regarded as an error in accuracy. An MR-2 penalty may be applied in particular cases if agreed at the coordination meeting.

PA -1   This is deducted from A or B marks in the case of premature approximation. The PA -1 penalty is usually discussed at the meeting.

1   **EITHER:** State or imply non-modular inequality $(2x – 3)^2 > 5^2$, or corresponding equation

                   or pair of linear equations   M1

                   Obtain critical values –1 and 4   A1

                   State correct answer $x < –1, x > 4$ A1

      OR: State one critical value, e.g. $x = 4$, having solved a linear equation (or inequality)

                   or from a graphical method or by inspection   B1

                   State the other critical value correctly   B1

                   State correct answer $x < –1, x > 4$ B1   [3]

2   Obtain integral $\ln(x + 2)$ B1

     Substitute correct limits correctly   M1

     Use law for the logarithm of a product, a quotient or a power   M1

     Obtain given answer following full and correct working   A1   [4]

3   **(i)**   Use $\tan(A \pm B)$ formula to obtain an equation in $\tan x$ M1

         Use $\tan 45° = 1$ and obtain a correct equation in any form   A1

         Obtain the given equation correctly   A1   [3]

     (ii)   Solve the given quadratic in $\tan x$ and evaluate an inverse tangent   M1

         Obtain a correct answer, e.g. 18.4°   A1

         Obtain second answer, e.g. 26.6°, and no others in the given interval   A1   [3]

         [Treat the giving of answers in radians as a misread. Ignore answers outside the given interval.]

4   **(i)**   Commence division by $x^2 + x – 1$ obtaining quotient of the form $x + k$ M1

         Obtain quotient $x + 2$ A1

         Obtain remainder $3x + 4$ A1

         Identify the quotient and remainder correctly   A1√   [4]

     (ii)   Substitute $x = –1$ and evaluate expression   M1

         Obtain answer 0   A1   [2]

5   **(i)**   State or imply $2^{-x} = \dfrac{1}{y}$, or $2^{-x} = y^{-1}$ B1

         Substitute and obtain a 3-term quadratic in y M1

         Obtain the given answer correctly   A1   [3]

     (ii)   Solve the given quadratic and carry out correct method for solving an equation of the form

         $2^x = a$, where $a > 0$ M1

         Obtain answer $x = 1.58$ or 1.585 A1

         Obtain answer $x = 0$ B1   [3]

6 (i) State $2xy + x^2 \dfrac{dy}{dx}$ as derivative of x^2y B1

State $2y \dfrac{dy}{dx}$ as derivative of y^2 B1

Equate derivatives of LHS and RHS, and solve for $\dfrac{dy}{dx}$ M1

Obtain given answer   A1   [4]

(ii) Substitute and obtain gradient $\frac{2}{5}$, or equivalent   B1

Form equation of tangent at the given point (1, 2)   M1
Obtain answer $2x – 5y + 8 = 0$, or equivalent   A1   [3]
[The M1 is dependent on at least one of the B marks being obtained.]

7 (i) Make a recognisable sketch of a relevant graph, e.g. $y = 2 – x$ B1
Sketch an appropriate second graph, e.g. $y = e^{2x}$, and justify the given statement   B1   [2]

(ii) Consider sign of $e^{2x} – (2 – x)$ at $x = 0$ and $x = 0.5$, or equivalent   M1
Complete the argument correctly with correct calculations   A1   [2]

(iii) Show that $e^{2x} = 2 – x$ is equivalent to $x = \frac{1}{2} \ln(2 – x)$, or *vice versa*   B1   [1]

(iv) Use the iterative formula correctly at least once   M1
Obtain final answer 0.27   A1
Show sufficient iterations to justify its accuracy to 2 d.p., or show there is a sign change
in the interval (0.265, 0.275)   A1   [3]

8 (i) Use quotient rule   M1
Obtain correct derivative in any form   A1
Obtain given result correctly   A1   [3]

(ii) State $\cot^2 x \equiv –1 + \operatorname{cosec}^2 x$, or equivalent   B1
Obtain integral $–x – \cot x$ (f.t. on signs in the identity)   B1√
Substitute correct limits correctly   M1
Obtain given answer   A1   [4]

(iii) Use trig formulae to convert integrand to $\dfrac{1}{k \sin^2 x}$ where $k = \pm 2$, or ± 1 M1

Obtain given answer $\frac{1}{2} \operatorname{cosec}^2 x$ correctly   A1

Obtain answer $-\frac{1}{2} \cot x + c$, or equivalent   B1   [3]
