Mathematical Formulae and Statistical Tables (Blue)

Total Marks

--

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 125.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

1. $f(x) = x^5 + x^3 - 12x^2 - 8, \quad x \in \mathbb{R}$

(a) Show that the equation $f(x) = 0$ can be written as

$$x = \sqrt[3]{\frac{4(3x^2 + 2)}{x^2 + 1}} \quad (3)$$

(b) Use the iterative formula

$$x_{n+1} = \sqrt[3]{\frac{4(3x_n^2 + 2)}{x_n^2 + 1}}$$

with $x_0 = 2$, to find x_1, x_2 and x_3 giving your answers to 3 decimal places. (3)

The equation $f(x) = 0$ has a single root, α .

(c) By choosing a suitable interval, prove that $\alpha = 2.247$ to 3 decimal places. (2)

6.

Figure 1

Figure 1 shows a sketch of the curve C with equation $y = 2e^{-x}\sqrt{\sin x}$, $0 \leq x \leq \pi$. The finite region R , shown shaded in Figure 1, is bounded by the curve and the x -axis.

- (a) Complete the table below with the value of y corresponding to $x = \frac{\pi}{2}$, giving your answer to 5 decimal places.

x	0	$\frac{\pi}{4}$	$\frac{\pi}{2}$	$\frac{3\pi}{4}$	π
y	0	0.76679		0.15940	0

(1)

- (b) Use the trapezium rule, with all the values of y in the completed table, to obtain an estimate for the area of the region R . Give your answer to 4 decimal places.

(3)

- (c) Given $y = 2e^{-x}\sqrt{\sin x}$, find $\frac{dy}{dx}$ for $0 < x < \pi$.

(3)

The curve C has a maximum turning point when $x = a$.

- (d) Use your answer to part (c) to find the value of a , giving your answer to 3 decimal places.

(3)

9.

$$f(x) = 2\ln(x) - 4, \quad x > 0, \quad x \in \mathbb{R}$$

(a) Sketch, on separate diagrams, the curve with equation

(i) $y = f(x)$

(ii) $y = |f(x)|$

On each diagram, show the coordinates of each point at which the curve meets or cuts the axes.

On each diagram state the equation of the asymptote.

(5)

(b) Find the exact solutions of the equation $|f(x)| = 4$

(4)

$$g(x) = e^{x+5} - 2, \quad x \in \mathbb{R}$$

(c) Find $gf(x)$, giving your answer in its simplest form.

(3)

(d) Hence, or otherwise, state the range of gf .

10.

Figure 2

Figure 2 shows a sketch of part of the curve C with parametric equations

$$x = \frac{20t}{2t + 1} \quad y = t(t - 4), \quad t > 0$$

The curve cuts the x -axis at the point P .

(a) Find the x coordinate of P . (2)

(b) Show that $\frac{dy}{dx} = \frac{(t - A)(2t + 1)^2}{B}$ where A and B are constants to be found. (5)

(c) (i) Make t the subject of the formula

$$x = \frac{20t}{2t + 1}$$

(ii) Hence find a cartesian equation of the curve C . Write your answer in the form

$$y = f(x), \quad 0 < x < k$$

where $f(x)$ is a single fraction and k is a constant to be found. (6)
