

5.

Figure 2

A parcel of weight 10 N lies on a rough plane inclined at an angle of 30° to the horizontal. A horizontal force of magnitude P newtons acts on the parcel, as shown in Figure 2. The parcel is in equilibrium and on the point of slipping up the plane. The normal reaction of the plane on the parcel is 18 N. The coefficient of friction between the parcel and the plane is μ . Find

(a) the value of P , (4)

(b) the value of μ . (5)

The horizontal force is removed.

(c) Determine whether or not the parcel moves. (5)

Question 5 continued

Lined area for writing the answer to Question 5.

6. [In this question the horizontal unit vectors **i** and **j** are due east and due north respectively.]

A model boat *A* moves on a lake with constant velocity $(-\mathbf{i} + 6\mathbf{j}) \text{ m s}^{-1}$. At time $t = 0$, *A* is at the point with position vector $(2\mathbf{i} - 10\mathbf{j}) \text{ m}$. Find

(a) the speed of *A*, (2)

(b) the direction in which *A* is moving, giving your answer as a bearing. (3)

At time $t = 0$, a second boat *B* is at the point with position vector $(-26\mathbf{i} + 4\mathbf{j}) \text{ m}$.

Given that the velocity of *B* is $(3\mathbf{i} + 4\mathbf{j}) \text{ m s}^{-1}$,

(c) show that *A* and *B* will collide at a point *P* and find the position vector of *P*. (5)

Given instead that *B* has speed 8 m s^{-1} and moves in the direction of the vector $(3\mathbf{i} + 4\mathbf{j})$,

(d) find the distance of *B* from *P* when $t = 7 \text{ s}$. (6)
