2 A student investigated the extension of a spring to determine its stiffness.

The student suspended the spring from a fixed support and added masses to the lower end of the spring as shown.

The student used a metre rule to make measurements of the spring as the mass was increased.

The student plotted a graph of applied force F against the extension of the spring x.

3 A student used an electron beam tube to accelerate electrons towards a thin slice of graphite as shown. The electrons passing through the graphite produced a diffraction pattern on the screen. This is similar to the effect seen when light passes through a diffraction grating.

The diffraction pattern seen on the curved screen is shown below.

(a)	Describe how the student can accurately determine the radius of the first bright ring

4 A student carried out an experiment to determine the mass per unit length  $\mu$  of a string, using a standing wave. The standing wave produced is shown in the diagram.

The student recorded the following data.

Length of string l	1.25 m
Frequency f	105 Hz
Mass m	0.25 kg
