## Pearson Edexcel

## Mark Scheme (Results)

January 2019

Pearson Edexcel International GCSE
In Physics (4PH0) Paper 1P

## Edexcel and BTEC Qualifications

#### Abstract

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

\begin{tabular}{|c|c|c|c|}
\hline Question number \& Answer \& Notes \& Marks \\
\hline \begin{tabular}{l}
1 (a) (i) \\
(ii)
\end{tabular} \& \begin{tabular}{l}
B (1.0 m); \\
A is incorrect because it is only half the wavelength \\
C is incorrect because it is 1.5 wavelengths \\
\(D\) is incorrect because it is 2 wavelengths \\
C ( 4 cm ); \\
A is incorrect because it is a quarter of the amplitude \\
\(B\) is incorrect because it is half of the amplitude \\
\(D\) is incorrect because it is double the amplitude
\end{tabular} \& \& 1

1 <br>

\hline (b) \& | vibrations / oscillations / disturbance; (are) parallel or perpendicular to direction of energy transfer / wave (travel/movement); correct identification of both types; e.g. |
| :--- |
| gets 3 marks | \& allow suitably labelled diagrams \& 3 <br>

\hline (c) \& | any two from: |
| :--- |
| MP1. speed (in vacuo); |
| MP2. idea that they don't need a medium to propagate; |
| MP3. can all be reflected / refracted / diffracted; MP4. all carry energy / information; | \& | allow quoted speed $3.0 \times 10^{8} \mathrm{~m} / \mathrm{s}$ allow can travel through vacuum |
| :--- |
| apply positive marking, not list marking | \& 2 <br>

\hline
\end{tabular}

\begin{tabular}{|c|c|c|c|}
\hline \& \& \& \\
\hline \begin{tabular}{l}
(d) (i) \\
(ii) \\
(iii)
\end{tabular} \& \begin{tabular}{l}
A (gamma rays); \\
\(B\) is incorrect because infrared is not ionising enough \\
\(C\) is incorrect because microwave is not ionising enough \\
\(D\) is incorrect because radio is not ionising enough \\
D (visible light); \\
A is incorrect because microwave is not visible to humans \\
\(B\) is incorrect because radio is not visible to humans \\
\(C\) is incorrect because ultraviolet is not visible to humans \\
any two from: \\
MP1. idea that x-rays are ionising / cause cell damage; \\
MP2. idea that risk increases with greater exposure; \\
MP3. idea that exposure reduced by increasing distance away;
\end{tabular} \& \begin{tabular}{l}
allow x-rays dangerous to health cause cancer \\
unqualified "dangerous"/"harmful" is insufficient allow "to avoid excessive exposure" allow exposure reduced by shielding of walls
\end{tabular} \& 1

1

2 <br>
\hline
\end{tabular}

| Question number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| 3 (a) | both poles the same; both poles labelled as north / N;; | ignore additional poles labelled near dashed lines | 2 |
| (b) | any suitable method, e.g. <br> place plotting compass \{near magnet(s) / in magnetic field\}/ use of iron filings; <br> move compass to different position (and repeat) / tap paper gently (to reveal shape); compass gives direction of field; | allow suitably clear diagrams <br> allow steel dust, iron powder for iron filings filings must be suitably qualified allow using multiple compasses must be clear | 3 |

| Question number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| 4 (a) (i) <br> (ii) | ```pressure = force \div area; calculation of total weight; substitution and rearrangement; evaluation; e.g. 0.432 (= 0.072 x 6) (area =) 0.432 / 820 (area =) 0.00053(m2)``` | allow rearrangements and standard symbols e.g. $p=F \div A$ $\begin{aligned} & (0.072 \times 6) / 820 \\ & 0.00052683\left(\mathrm{~m}^{2}\right) \\ & 5.2683 \times 10^{-4}\left(\mathrm{~m}^{2}\right) \\ & \text { allow } 0.0005\left(\mathrm{~m}^{2}\right) \\ & 0.0000878\left(\mathrm{~m}^{2}\right) \end{aligned}$ <br> gains 2 marks <br> POT error loses a mark | 3 |
| (b) (i) <br> (ii) | pressure decreases; <br> (because) area (in contact with table) increases / weight (over the same area) decreases; <br> density remains constant; (because) mass of squares AND volume of squares is the same; | accept quantitative method <br> density not affected allow because the material is the same | 2 2 |

| Question number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| 5 (a) (i) | ```substitution into E = V }\times\textrm{I}\times\textrm{t}\mathrm{ ; rearrangement; correct evaluation to 2 s.f.; e.g. 25=4.5 x 0.65 x time (time =) 25 / (4.5 x 0.65) (time =) 8.5 (s)``` | no mark for formula alone as given in paper <br> correct answers not given to 2 s.f. gain 2 marks only e.g. 9 (s), 8.55 (s), 8.547... (s) etc. | 3 |
| (ii) | $\text { GPE }=\text { mass } \times g \times \text { height; }$ | allow rearrangements and standard symbols e.g. GPE $=m \times g \times h$ | 1 |
| (iii) | substitution; rearrangement; evaluation; | answer of 0.00064 (m) gains 2 marks only | 3 |
|  | e.g. <br> $5.0=0.780 \times 10 \times$ height <br> (height $=$ ) $5.0 /(0.780 \times 10)$ <br> (height =) $0.64(\mathrm{~m})$ | allow 0.641... (m) <br> allow use of $g=9.81$ <br> giving 0.65 (m) |  |
| (iv) | any two from: <br> MP1. energy transferred (to surroundings) as heat / sound; <br> MP2. mass also has KE; <br> MP3. mass of string has been ignored / eq.; <br> MP4. motor not 100\% efficient; | condone energy wasted as heat/sound <br> energy lost to wires/winding in motor | 2 |
| (b) | any four from: <br> MP1. current in coil; <br> MP2. (creates) magnetic field around wires / coil; <br> MP3. interaction between this field and field of magnets; <br> MP4. (produces) a force on the wires / coil; <br> MP5. forces on opposite sides of the coil are in opposite directions; | check diagram for force arrows <br> allow coil becoming electromagnet <br> can be shown on the diagram | 4 |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

| MP6. idea that direction of current <br> reverses (every half turn); | allow commutator <br> switches current around |  |
| :--- | :--- | :--- |

Total for question 5 = 13 marks

| Question number | Answer |  | Notes | Marks |
| :---: | :---: | :---: | :---: | :---: |
| 6 (a) | use of stopwatch / stop clock; <br> start timing when released and stop timing when parachute hits the floor; | allow use of datalogger condone timer |  | 2 |
| (b) | ```independent = mass (of parachute); dependent = time (taken for fall);``` |  |  | 2 |
| (c) | any one from: <br> (constant) height; <br> still air / no wind; <br> release from rest; <br> same area of parachute / same parachute; | however expressed |  | 1 |
| (d) (i) | correct average; given to 2 decimal places; $\begin{aligned} & \text { e.g. } \\ & 0.87666 . . . \\ & 0.88 \end{aligned}$ | mark independently |  | 2 |
| (ii) | suitable linear scale chosen (>50\% of grid used); axes labelled with quantities and unit; plotting correct to nearest half square (minus one for each plotting error) ;; | ignore orientation <br> ignore final point <br> i.e. two plotting errors = no marks for plotting |  | 4 |
|  |  | mass in $g$ | average time taken in s |  |
|  |  | 20 | 1.68 |  |
|  |  | 40 | 1.26 |  |
|  | Wo | 60 | 1.11 |  |
|  |  | 80 | 0.99 |  |
|  |  | 100 | 0.93 |  |
|  | + . . . | 120 | 0.88 |  |

www.igexams.com

| (iii) | acceptable curve of best fit drawn; | i.e. smooth curve with even distribution of points either side allow ecf from plotting errors ignore parts of curve outside plotted points if extrapolated | 1 |
| :---: | :---: | :---: | :---: |
| (e) (i) | down arrow labelled weight; <br> up arrow labelled air resistance / drag; | allow gravitational force ignore 'gravity' allow friction ignore lift, upthrust | 2 |
| (ii) | any three from: <br> MP1. idea of unbalanced force at the start (which causes acceleration); <br> MP2. air resistance increases with speed; <br> MP3. idea of forces become balanced; <br> MP4. (therefore) no resultant force (near the bottom); | e.g. only weight is acting <br> e.g. weight is equal to air resistance | 3 |

| Question <br> number | Answer | Notes | Marks |
| :--- | :--- | :--- | :---: |
| 7 | any five from: <br> MP1. | determine / measure distance; <br> MP2. <br> MP3. <br> determine / measure time; <br> appropriate measuring instrument for <br> distance OR time; <br> measuring <br> diameter/radius and <br> calculating distance | 5 |
| MP4.use a suitable distance / count laps (of <br> known length); | MP5. <br> repeat experiment and calculate average; <br> MP6. <br> use of speed = distance $\div$ time; <br> MP7. <br> suitable experimental precaution e.g. <br> reaction time considered, time from and to <br> predetermined points; | ignore 'human error' <br> allow mark a <br> start/finish point |  |

\end{tabular} \& \begin{tabular}{l}
(unbalanced) force \(=\) mass \(\times\) acceleration; \\
substitution OR rearrangement; \\
evaluation; \\
e.g. \\
\(49=45 \times a \quad\) OR \(a=F / m\) \\
\((\mathrm{a}=) 1.1\left(\mathrm{~m} / \mathrm{s}^{2}\right)\) \\
any suitable suggestion; \\
e.g. \\
friction between snow / ground and sledge \\
ground is not level \\
towing rope / direction at an angle to the ground / direction of movement
\end{tabular} \& \begin{tabular}{l}
allow \\
rearrangements and standard symbols e.g. \(F=m \times a\) \\
allow 1.088... (m/s \({ }^{2}\) ) reject \(1.08\left(\mathrm{~m} / \mathrm{s}^{2}\right)\) \\
allow air resistance, drag
\end{tabular} \& 1

2

1 <br>

\hline | (b) (i) |
| :--- |
| (ii) |\& ``

acceleration = change in velocity }\div\mathrm{ time (taken);
substitution AND rearrangement;
evaluation to at least 2s.f.;
e.g.
v=1.3 < 2.4(+ 0)
(v =) 3.1 (m/s)

``` & \begin{tabular}{l}
allow \\
rearrangements and \\
standard symbols \\
e.g. \(a=\Delta v \div t\) \\
\(a=v-u \div t\)
\[
v=a \times t
\] \\
allow \(3.12(\mathrm{~m} / \mathrm{s})\)
\end{tabular} & 1

2 \\
\hline \begin{tabular}{l}
(c) (i) \\
(ii)
\end{tabular} & \begin{tabular}{l}
area under the line / graph; \\
any three from: \\
MP1. (constant) acceleration between 0 and \(A\); \\
MP2. constant velocity between A and B; \\
MP3. constant deceleration / negative acceleration between \(B\) and \(C\); \\
MP4. deceleration is less than acceleration;
\end{tabular} & allow no acceleration & 1
3 \\
\hline
\end{tabular}

\hline Question number & Answer & Notes & Marks \\
\hline 9 (a) & Geiger-muller tube; & \begin{tabular}{l}
allow \\
GM tube \\
spark counter \\
geiger counter
\end{tabular} & 1 \\
\hline \begin{tabular}{l}
(b) (i) \\
(ii)
\end{tabular} & \begin{tabular}{l}
any two from: \\
MP1. rocks / buildings / radon gas; \\
MP2. cosmic rays / (radiation from) the Sun; \\
MP3. medical sources; \\
MP4. nuclear waste / accidents; \\
MP5. some foods e.g. coffee, bananas etc.; \\
any three from: \\
MP1. remove the radioactive source; \\
MP2. measure background count; \\
MP3. repeat the measurement and calculate average; \\
MP4. idea of scaling background count to same time as count measurement; \\
MP5. subtract background count from the non-corrected measurement;
\end{tabular} & allow background count taken for 20 minute period & 3 \\
\hline (c) & number of neutrons decreases by one; number of protons increases by one; & \begin{tabular}{l}
condone atomic number for protons \\
'neutron becomes a proton' gains both marks 'atomic number increases by 1 , mass number stays the same' gains both marks allow for one mark if no other scored for the idea that the nucleus becomes a different element
\end{tabular} & 2 \\
\hline (d) & \begin{tabular}{l}
any two from: \\
MP1. reduce exposure time; \\
MP2. handle with tongs / at a distance;
\end{tabular} & allow keeping in lead container when not in use & 2 \\
\hline
\end{tabular}
\begin{tabular}{|l|l|l|} 
MP3. use shielding; & \begin{tabular}{l} 
allow use of gloves, \\
mask etc.
\end{tabular} \\

\hline Question number & Answer & Notes & Marks \\
\hline \begin{tabular}{l}
11 (a) (i) \\
(ii)
\end{tabular} & \begin{tabular}{l}
any two from: \\
MP1. optical fibres for communication; MP2. endoscopes; MP3. optical fibres in decorative lamps etc.; MP4. safety reflector; \\
MP5. prism in \{binoculars / camera / periscope / rangefinder\}; \\
idea that light travels from more (optically) dense medium to less (optically) dense medium; \\
incident angle greater than critical angle;
\end{tabular} & \begin{tabular}{l}
allow 1 mark for unqualified "optical fibres" in the absence of any other marks \\
e.g. bicycle/car reflector, cat's eye \\
allow if expressed in terms of refractive index allow "has to go from glass to air" / eq.
\end{tabular} & 2 \\
\hline \begin{tabular}{l}
(b) (i) \\
(ii) \\
(iii) \\
(iv) \\
(v)
\end{tabular} & \begin{tabular}{l}
normal line drawn correctly by eye where light ray meets flat surface at \(A\); \\
angle measured in the range \(24-30^{\circ}\); \\
ray emerges from block at position \(A\); refracting correctly away from normal;
\[
\sin (c)=1 \div n ;
\] \\
substitution AND rearrangement; evaluation; \\
e.g.
\[
\begin{aligned}
& n=1 \div \sin \left(40^{\circ}\right) \\
& (n=) 1.6
\end{aligned}
\]
\end{tabular} & \begin{tabular}{l}
allow ecf from incorrect normal \\
allow rearrangements and word equations \\
allow 1.557...
\end{tabular} & \begin{tabular}{l}
