# UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS 

## MARK SCHEME for the November 2004 question paper

## 5070 CHEMISTRY <br> 5070/03 <br> Paper 3 (Practical Test), maximum mark 40

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published Report on the Examination.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the Report on the Examination.

- CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

## GCE O Level

## MARK SCHEME

MAXIMUM MARK: 40

SYLLABUS/COMPONENT: 5070/03
CHEMISTRY
Paper 3 (Practical Test)

| Page 1 Mark Scheme | Syllabus |
| :---: | :---: | :---: |

1 (a) Titration 12 marks
Accuracy 8 marks
These marks are given using any of the candidate's values not just ticked ones.

For the two best titres give:

| 4 marks | for a value within $0.2 \mathrm{~cm}^{3}$ of supervisor |
| :--- | :--- |
| 2 marks | for a value within $0.3 \mathrm{~cm}^{3}$ of supervisor |
| 1 mark | for a value within $0.4 \mathrm{~cm}^{3}$ of supervisor |

If candidates' or supervisors' results are given to 2 decimal places take to the nearest $0.1 \mathrm{~cm}^{3}$.

If halfway, round up or down so as to favour the candidate.

## Concordance 3 marks

These are based on all the values ticked by the candidate (not just those chosen for the accuracy marks) and are independent of the accuracy marks.

Give:

| 3 marks | if all ticked values are within $0.2 \mathrm{~cm}^{3}$ |
| :--- | :--- |
| 2 marks | if all ticked values are within $0.3 \mathrm{~cm}^{3}$ |
| 1 mark | if all ticked values are within $0.4 \mathrm{~cm}^{3}$ |

To score any concordance mark at least two of the ticked values must be within $\mathbf{0 . 6} \mathbf{c m}^{\mathbf{3}}$ of the Supervisor's value.

If the candidate ticks only one value, or none at all, then see the notes on the next page.

Average 1 mark
Give 1 mark if the candidate calculates a correct average (error not greater than 0.05 ) of all his ticked value.

If the candidate ticks only one value, or none at all, then see notes on the next page.

If the majority of candidates are not scoring at least 6 out of 8 for accuracy, it may be necessary to consider awarding the accuracy marks based on a 'candidate average' rather than the Supervisor's value.

Assuming a $25 \mathrm{~cm}^{3}$ pipette and a titre of $24.6 \mathrm{~cm}^{3}$
(b) Concentration of $\mathrm{MIO}_{3}$, in mol/dm ${ }^{3} 2$ marks

$$
\begin{align*}
\text { conc of } \mathrm{MIO}_{3} & =\frac{24.6 \times 0.1}{25.0 \times 6}  \tag{1}\\
& =0.0164 \text { (correct to } 0.0001 \text { ) } \tag{1}
\end{align*}
$$

Allow 0.016 for 0.0160 etc., answers should be correct to + or -1 in the third significant figure.

Candidates who work out, and write down, the answer to the correct number of significant figures, but in the answer line use fewer figures are not penalised at this stage.
(c) $\mathrm{Mr}_{\mathrm{r}}$ of $\mathrm{MiO}_{3}$

1 mark
$=3.30 / 0.0164$
$=20$
(d) $A_{\mathrm{r}}$ of M

1 mark

$$
\begin{align*}
& =201-(127+48) \\
& =\quad 26 \tag{1}
\end{align*}
$$

(e) Identity of $M$

1 mark
$M$ is sodium
The metal must be the closest metal which forms a +1 ion
Mark the calculations consequentially throughout even if it produces an impossible result.

In (c) and (d) give the mark for the method, ignore evaluation.

|  | O LEVEL - NOVEMBER 2004 | 5070 | 3 |

Question 2
23 marks
$\mathbf{R}$ is nickel sulphate, $\mathbf{S}$ is copper sulphate, $\mathbf{T}$ is cobalt nitrate

| R/Nickel |  | S/Copper | T/Cobalt |  | General points |
| :---: | :---: | :---: | :---: | :---: | :---: |
| NaOH |  | NaOH | NaOH |  |  |
| green ppt <br> ignore shades of green <br> blue/green | (1) | blue ppt <br> allow any shade of blue <br> blue/green (0) | blue ppt <br> allow any shade of blue | (1) | both colour and ppt required allow solid, suspension, powder <br> do not allow substance, particles, deposit, residue, sediment, gelatinous, insoluble etc. |
| + excess <br> ppt insoluble |  | ppt insoluble | ppt insoluble <br> ppt turns pink/or grey <br> pink ppt | (1) <br> (1) <br> (2) | no change, <br> to score this mark, the candidates must have a ppt (any colour) in (a) partially soluble, partially insoluble scores (0) |
| $\begin{equation*} +\mathrm{H}_{2} \mathrm{O}_{2} \tag{1} \end{equation*}$ <br> effervesces <br> gas relights glowing splint oxygen produced | (1) <br> (1) <br> (1) | effervesces <br> forms a black ppt/brown ppt <br> colour change must be linked to ppt. * | effervesces forms a brown ppt * | (1) <br> (1) | fizzes etc., gas viq evolved <br> effervesces scores each time but the oxygen test scores only one. Allow even if other gases identified <br> to score conclusion mark, test must be at least partially correct (i.e. relights a burning splint) |

| Page 4 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | O LEVEL- NOVEMBER 2004 | 5070 | 3 |

| R/Nickel |  | S/Copper |  | T/Cobalt |  | General points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{NH}_{3}$ |  |  |  |  |  |  |
| green or blue ppt | (1) | blue ppt | (1) | green or blue ppt | (1) |  |
| excess <br> soluble in excess <br> blue solution | (1) (1) | soluble in exces <br> blue solution | (1) (1) | insoluble in excess | (1) | if no ppt with $\mathrm{Ni}^{2+}$ or $\mathrm{Cu}^{2+}$ allow blue solution $\left(\mathrm{Ni}^{2+}\right)$ dark blue solution ( $\mathrm{Cu}^{2+}$ ) <br> 1 mark for each |
| $\mathrm{Ba}\left(\mathrm{NO}_{3}\right)_{2}$ |  |  |  |  |  |  |
| white ppt + acid <br> ppt insoluble |  | both white and ppt required |  |  |  |  |
| $\mathrm{AgNO}_{3}$ |  |  |  |  |  |  |
| no reaction | (1) | no ppt, no chang <br> any implication of |  | er part loses the mark |  |  |

Conclusions 1 mark
the anion is a sulphate or $\mathrm{SO}_{4}{ }^{2-}$ whites ppt in Test 3 which does not dissolve in acid and no ppt in Test 4
any 23 marks to score
25 scoring points
